

1 **ABSTRACT OF THE DISCLOSURE**

2 A curtain assembly has a frame, a first curtain, a second curtain and a
3 positioning device. The frame has a top rod, a bottom rod and two side rods
4 mounted between the top rod and the bottom rod. The curtains are attached
5 respectively to the top rod and the bottom rod of the frame and each has a
6 permeability to light different from each other. The positioning device is
7 mounted in the frame and connected to the first and second curtains to hold the
8 first and second curtains at desired positions. Accordingly, a curtain assembly
9 with an adjustable permeability to light and versatile in use is provided.
